emodpy-tbhiv is a collection of Python scripts and utilities created to streamline user interactions with EMOD and idmtools for modeling measles. Much of the functionality is inherited from the [emod_api](#) and [emodpy](#) packages.

Additional information about how to use idmtools can be found at in [Welcome to idmtools](#). Additional information about EMOD TBHIV parameters for modeling tuberculosis can be found in [EMOD parameter reference](#).

See [Welcome to idmtools](#) for a diagram showing how idmtools and each of the related packages are used in an end-to-end workflow using EMOD as the disease transmission model.

EMODPY-TBHIV INSTALLATION

Follow the steps below to install emodpy-tbhiv.

1.1 Prerequisites

First, ensure the following prerequisites are met.

- Windows 10 Pro or Enterprise, Linux, or Mac
- Python 3.6 64-bit (<https://www.python.org/downloads/release>)
- A file that indicates the pip index-url:
 - Windows
 - Linux

In C:\Users\Username\pip\pip.ini, containing the following:

```
[global]
index-url = https://packages.idmod.org/api/pypi/pypi-production/simple
```

In \$HOME/.config/pip/pip.conf, containing the following:

```
[global]
index-url = https://packages.idmod.org/api/pypi/pypi-production/simple
```

1.2 Installation instructions

1. Open a command prompt and create a virtual environment in any directory you choose. The command below names the environment “v-emodpy-tbhiv”, but you may use any desired name:

```
python -m venv v-emodpy-tbhiv
```

2. Activate the virtual environment:

- Windows
- Linux

Enter the following:

```
v-emodpy-tbhiv\Scripts\activate
```

Enter the following:

```
source v-emodpy-tbhiv/bin/activate
```

3. Install emodpy-tbhiv packages:

```
pip install emodpy-tbhiv
```

If you are on Python 3.6, also run:

```
pip install dataclasses
```

If you are on Linux, also run:

```
pip install keyrings.alt
```

4. When you are finished, deactivate the virtual environment by entering the following at a command prompt:

```
deactivate
```

EMODPY_TBHIV

2.1 emodpy_tbhiv package

The emodpy-tbhiv module is intended to house scripts and tools that enable disease modelers to work more easily with the IDM EMOD TBHIV model.

2.1.1 Subpackages

emodpy_tbhiv.demographics package

Submodules

emodpy_tbhiv.demographics.TBHIVDemographics module

```
class emodpy_tbhiv.demographics.TBHIVDemographics(pop,  
                                                    nodes=None,  
                                                    idref='Gridded  
                                                    world  
                                                    grump2.5arcmin',  
                                                    base_file=None)
```

Bases: `emod_api.demographics.Demographics.Demographics`

This class is derived from emod_api.demographics' Demographics class so that we can set certain defaults for TBHIV in construction. Keen observers will note that SetDefaultProperties does not look like a TBHIV-specific function. But as we add other disease types the generalizations and specifics will become clearer. The architectural point is solid.

SetHIVCoInfectionDistribution()

Insert some notion of a default HIVCoInfection distribution.

SetHIVTBCoInfectionMortalityDistribution()

Insert some notion of a default HIVTBCoInfection Mortality distribution.

```
emodpy_tbhiv.demographics.TBHIVDemographics.fromBasicNode(lat=0,           lon=0,  
                                                            pop=1000000.0,  
                                                            name=1,  
                                                            forced_id=1,      im-  
                                                            plicit_config_fns=None)
```

This function creates a single-node TBHIVDemographics instance from the params you give it.

```
emodpy_tbhiv.demographics.TBHIVDemographics.fromData (pop=1000000.0, file-  
name_male='Malawi_male_mortality.csv',  
file-  
name_female='Malawi_female_mortality.csv')
```

emodpy_tbhiv.interventions package

```
emodpy_tbhiv.interventions.purge_campaign_event (camp_event)
```

Submodules

emodpy_tbhiv.interventions.active_diagnostic module

```
emodpy_tbhiv.interventions.active_diagnostic.ActiveDiagnostic (camp, trigger_treatment_list,  
ac-  
tive_sensitivity=1.0,  
ac-  
tive_specificity=1.0,  
pos_event='TBTestPositive',  
treat-  
ment_fraction=1,  
start_day=0,  
duration=-  
1, property_restrictions_list=[],  
nodeIDs=[],  
black_period=0,  
black_trigger='Blackout',  
event_name='TB  
Diagnosis Active  
Simple')
```

Create and return triggered campaign event that issues an **ActiveDiagnostic** intervention. See [ActiveDiagnostic](#)

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **active_sensitivity** – Sensitivity. Defaults to 1.0.
- **active_specificity** – Specificity. Defaults to 1.0.
- **pos_event** – Signal (or trigger) which is broadcast if the test is positive. Defaults to 'TBTestPositive',
- **treatment_fraction** – Fraction of population testing positive you get the positive result effect.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.

- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.active_diagnostic.new_intervention_as_file(camp,
                                                                    start_day=1,
                                                                    file-
                                                                    name=None)
```

emodpy_tbhiv.interventions.art module

```
emodpy_tbhiv.interventions.art.ART(camp, trigger_treatment_list, start_day=0, duration=-
                                     1, property_restrictions_list=[], nodeIDs=[],
                                     black_period=0, black_trigger='Blackout',
                                     event_name='ART')
```

Create and return triggered campaign event that issues an ART intervention.

Parameters

- **camp** – Centralized campaign module instance.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.art.new_intervention_as_file(camp, filename='art.json')
```

emodpy_tbhiv.interventions.bcg module

```
emodpy_tbhiv.interventions.bcg.BCG(camp, trigger_treatment_list, initial_efficacy=1.0, vac-  
cine_take=1, age_take_decay=1.0, box_duration=365,  
immune_decay=3650, start_day=0, duration=- 1, prop-  
erty_restrictions_list=[], nodeIDs=[], black_period=0,  
black_trigger='Blackout', event_name='Vaccine Health  
Seeking')
```

Create and return triggered campaign event that issues an BCG vaccine intervention.

Parameters

- **camp** – Centralized campaign module instance.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **initial_efficacy** – Initial efficacy of the vaccine. Defaults to 1.0.
- **vaccine_take** – Fraction of the population receiving the vaccine for whom it is efficacious. Defaults to 1.0.
- **age_take_decay** – ... Defaults to 1.0.
- **box_duration** – Period of time over which the initial efficacy persists before decay. Defaults to 1 year.
- **immune_decay** – Period of time over which the efficacy decays to 0. Defaults to 10 years.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.bcg.new_intervention_as_file(camp, filename=None)
```

emodpy_tbhiv.interventions.cd4diag module

```
emodpy_tbhiv.interventions.cd4diag.CD4Diag(camp, trigger_treatment_list,  
event_200='Below200',  
event_350='Below350',  
event_500='Below500',  
event_above_500='Above500', start_day=0,  
duration=- 1, property_restrictions_list=[],  
nodeIDs=[], black_period=0,  
black_trigger='Blackout', event_name='CD4  
Diagnostic')
```

Create and return triggered campaign event that issues an CD4Diagnostic intervention.

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **event_200** – ...
- **event_350** – ...
- **event_500** – ...
- **event_above_500** – ...
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.cd4diag.new_intervention_as_file(camp, file_name='cd4.json')
```

emodpy_tbhiv.interventions.diag_treat_neg module

```
emodpy_tbhiv.interventions.diag_treat_neg.DiagnosticTreatNeg(camp, trigger_treatment_list,
    base_sensitivity_smeapos=1.0,
    base_sensitivity_smeaneg=1.0,
    pos_event='TBTestPositive',
    neg_event='TBTestNegative',
    def_event='TBTestDefault',
    treatment_fraction=1,
    start_day=0,
    duration=-1,
    property_restrictions_list=[],
    nodeIDs=[],
    black_period=0,
    black_trigger='Blackout',
    event_name='TB
    Diagnosis')
```

Create and return triggered campaign event that issues an `DiagnosticTreatNeg` intervention. See [DiagnosticTreatNeg](#)

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.

- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **base_sensitivity_smeapos** – Sensitivity. Defaults to 1.0.
- **base_sensitivity_smeaneg** – Specificity. Defaults to 1.0.
- **pos_event** – Signal (or trigger) which is broadcast if the test is positive. Defaults to 'TBTestPositive',
- **neg_event** – Defaults to 'TBTestNegative'.
- **def_event** – Defaults to 'TBTestDefault'.
- **treatment_fraction** – Fraction of population testing positive you get the positive result effect.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.diag_treat_neg.new_intervention_as_file(camp, file-  
                                                                    name='dtn.json')
```

emodpy_tbhiv.interventions.hiv_diag module

```
emodpy_tbhiv.interventions.hiv_diag.HIVDiagnostic(camp,      trigger_treatment_list,  
                                                    base_sensitivity=1.0,  
                                                    base_specificity=1.0,  
                                                    pos_event='HIVTestedPositive',  
                                                    neg_event='HIVTestedNegative',  
                                                    treatment_fraction=1,  
                                                    start_day=0,      duration=-1,  
                                                    property_restrictions_list=[],  
                                                    nodeIDs=[],      black_period=0,  
                                                    black_trigger='Blackout',  
                                                    event_name='HIV Diagnostic')
```

Create and return triggered campaign event that issues an HIVSimpleDiagnostic intervention. See [HIVSimpleDiagnostic](#)

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **base_sensitivity** – Sensitivity. Defaults to 1.0.

- **base_specificity** – Specificity. Defaults to 1.0.
- **pos_event** – Signal (or trigger) which is broadcast if the test is positive. Defaults to ‘HIVTestedPositive’.
- **neg_event** – Signal (or trigger) which is broadcast if the test is negative. Defaults to ‘HIVTestedNegative’.
- **treatment_fraction** – Fraction of population testing positive you get the positive result effect.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.hiv_diag.new_intervention_as_file(camp, file-
                                                             name=None)
```

emodpy_tbhiv.interventions.hiv_seeding module

```
emodpy_tbhiv.interventions.hiv_seeding.HIV(camp, time_offset=0, disease='HIV', reps=-
                                             1, interval=1, start_day=0, nodeIDs=[],
                                             event_name='HIV Incidence')
```

Create a scheduled campaign event that issues an OutbreakIndividualTBorHIV intervention. Useful for seeding interventions in TBHIV_SIM.

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **time_offset** – ... Defaults to 0.
- **disease** – “TB” or “HIV”. Default is “HIV”.
- **reps** – Number of repetitions (integer). Defaults to no repetition.
- **interval** – Timesteps between repetitions, if reps is set. Defaults to every day.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.hiv_seeding.new_intervention_as_file(camp, file-  
                                                                name='hiv.json')
```

emodpy_tbhiv.interventions.hsb module

```
emodpy_tbhiv.interventions.hsb.HSB(camp, trigger_treatment_list, output_event, probabil-  
                                     ity_per_step=1.0, start_day=0, duration=- 1, prop-  
                                     erty_restrictions_list=[], nodeIDs=[], black_period=0,  
                                     black_trigger='Blackout', event_name='HSB')
```

Create and return triggered campaign event that issues an SimpleHealthSeekingBehavior intervention. See [SimpleHealthSeekingBehavior](#)

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **output_event** – Signal to broadcast when ‘health’ is ultimately sought (string).
- **probability_per_step** – Probability of seeking per timestep, default to 1 which means near instantaneous.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optiona list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.hsb.new_intervention_as_file(camp, file-  
                                                         name='hsb_diag.json')
```

emodpy_tbhiv.interventions.ramp_dtn module

```
emodpy_tbhiv.interventions.ramp_dtn.RampDTN(camp, trigger_treatment_list,
                                             ramp_time=30,
                                             base_sensitivity_smeapos=1.0,
                                             base_sensitivity_smeaneg=1.0,
                                             base_sensitivity_smeapos2=1.0,
                                             base_sensitivity_smeaneg2=1.0,
                                             treatment_fraction=1.0,
                                             treatment_fraction2=1.0,
                                             pos_event='TBTestPositive',
                                             neg_event='TBTestNegative', de-
                                             faulters_event='TBTestDefault',
                                             pos_event2='TBTestPositive',
                                             neg_event2='TBTestNegative', de-
                                             faulters_event2='TBTestDefault',
                                             start_day=0, duration=-1, prop-
                                             erty_restrictions_list=[], nodeIDs=[],
                                             black_period=0, black_trigger='Blackout',
                                             event_name='RampDTN')
```

Create and return triggered campaign event that (TBD).

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **active_sensitivity** – Sensitivity. Defaults to 1.0.
- **active_specificity** – Specificity. Defaults to 1.0.
- **pos_event** – Signal (or trigger) which is broadcast if the test is positive. Defaults to 'TBTestPositive'.
- **treatment_fraction** – Fraction of population testing positive you get the positive result effect.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.ramp_dtn.new_intervention_as_file(camp, file-
                                                             name='ramp.json')
```

emodpy_tbhiv.interventions.resist_diag module

```
emodpy_tbhiv.interventions.resist_diag.ResistanceDiagnostic(camp, trigger_treatment_list,
                                                             sensitivity=1.0,
                                                             specificity=1.0,
                                                             pos_event='TBMDRTestPositive',
                                                             neg_event='TBMDRTestNegative',
                                                             def_event='TBMDRTestDefault',
                                                             treatment_fraction=1,
                                                             treatment_fraction_negative_test=1,
                                                             start_day=0,
                                                             duration=-1, property_restrictions_list=[],
                                                             nodeIDs=[],
                                                             black_period=0,
                                                             black_trigger='Blackout',
                                                             event_name='TB Diagnosis MDR')
```

Create and return triggered campaign event that issues an ResistanceDiagnostic intervention.

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **sensitivity** – Sensitivity. Defaults to 1.0.
- **specificity** – Specificity. Defaults to 1.0.
- **pos_event** – Signal (or trigger) which is broadcast if the test is positive. Defaults to 'TBMDRTestPositive'.
- **neg_event** – Signal (or trigger) which is broadcast if the test is negative. Defaults to 'TBMDRTestNegative'.
- **def_event** – Signal (or trigger) which is broadcast if the test is default. Defaults to 'TBMDRTestDefault'.
- **treatment_fraction** – Fraction of population testing positive you get the positive result effect. Defaults to 1.
- **treatment_fraction_negative_test** – ... Defaults to 1.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.

- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.resist_diag.new_intervention_as_file(camp, file-  
                                                                name='resist_diag.json')
```

emodpy_tbhiv.interventions.smear_diag module

```
emodpy_tbhiv.interventions.smear_diag.SmeaDiagnostic(camp, trigger_treatment_list,  
                                                    base_sensitivity_smeapos=1.0,  
                                                    base_sensitivity_smeaneg=1.0,  
                                                    pos_event='TestPositiveOnSmear',  
                                                    treatment_fraction=1,  
                                                    start_day=0, duration=- 1,  
                                                    property_restrictions_list=[],  
                                                    nodeIDs=[], black_period=0,  
                                                    black_trigger='Blackout',  
                                                    event_name='TB Diagnosis  
Smear Simple')
```

Create and return triggered campaign event that issues an SmeaDiagnostic intervention.

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **base_sensitivity_smeapos** – Sensitivity. Defaults to 1.0.
- **base_sensitivity_smea**neg – Specificity. Defaults to 1.0.
- **pos_event** – Signal (or trigger) which is broadcast if the test is positive. Defaults to 'TBTestPositiveOnSmear'.
- **treatment_fraction** – Fraction of population testing positive you get the positive result effect.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.smear_diag.new_intervention_as_file(camp, file-  
                                                                name='smear_diag.json')
```

emodpy_tbhiv.interventions.tb_treat_basic module

```
emodpy_tbhiv.interventions.tb_treat_basic.TBDrugTreatment (camp, trigger_treatment_list,
                                                             drug_name='DOTS',
                                                             inactivation_rate=0,
                                                             mortality_rate=0,
                                                             clearance_rate=0,
                                                             resistance_rate=0,
                                                             relapse_rate=0, reduced_transmit=1.0,
                                                             start_day=0, treatment_duration=180,
                                                             duration=- 1, property_restrictions_list=[],
                                                             nodeIDs=[],
                                                             black_period=0,
                                                             black_trigger='Blackout',
                                                             event_name='TBDrugTreatment')
```

Create and return triggered campaign event that issues an AntiTBDrug intervention. See [AntiTBDrug](#)

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **drug_name** – ... Defaults to 'DOTS',
- **inactivation_rate** – ... Defaults to 0,
- **mortality_rate** – ... Defaults to 0,
- **clearance_rate** – ... Defaults to 0,
- **resistance_rate** – ... Defaults to 0,
- **relapse_rate** – ... Defaults to 0,
- **reduced_transmit** – ... Defaults to 1.0,
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.tb_treat_basic.new_intervention_as_file (camp, filename=None)
```

emodpy_tbhiv.interventions.tbhiv_treat module

```
emodpy_tbhiv.interventions.tbhiv_treat.TBHIVDrugTreatment (camp, trigger_treatment_list,
                                                             drug_name, latent_multiplier=1.0,
                                                             active_multiplier=1.0,
                                                             start_day=0,
                                                             duration=-1, property_restrictions_list=[],
                                                             nodeIDs=[],
                                                             black_period=0,
                                                             black_trigger='Blackout',
                                                             event_name='TBHIVDrugTreatment')
```

Create and return triggered campaign event that issues a ‘TBHIVConfigurableTBdrug’ intervention. See [TBHIVConfigurableTBdrug](#)

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **drug_name** – ...
- **latent_multiplier** – ... Defaults to 1.0.
- **active_multiplier** – ... Defaults to 1.0.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.tbhiv_treat.new_intervention_as_file (camp, file_name='tb_drug_treat.json')
```

emodpy_tbhiv.interventions.triggered_pvc module

```
emodpy_tbhiv.interventions.triggered_pvc.TPVC(camp, trigger_treatment_list, prop-
    erty_to_change, final_prop_value,
    revert=0, daily_prob=1,
    start_day=0, duration=-1,
    property_restrictions_list=[],
    nodeIDs=[], black_period=0,
    black_trigger='Blackout',
    event_name='PropertyValueChanger')
```

Create and return triggered campaign event that issues an [PropertyValueChanger](#) intervention. See [PropertyValueChanger](#)

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **property_to_change** – Individual Property key (string).
- **final_prop_value** – New Individual Property value (string).
- **revert** – ... Defaults to 0.
- **daily_prob** – Daily probability of changing. Defaults to 1.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.triggered_pvc.new_intervention_as_file(camp, file-
    name='tpvc.json')
```

emodpy_tbhiv.interventions.vaccine module

```
emodpy_tbhiv.interventions.vaccine.Vaccine(camp, trigger_treatment_list, ini-
    tial_efficacy=1.0, vaccine_take=1,
    vtype='AcquisitionBlocking',
    box_duration=365, immune_decay=3650,
    start_day=0, duration=-1, prop-
    erty_restrictions_list=[], nodeIDs=[],
    black_period=0, black_trigger='Blackout',
    event_name='Vaccine')
```

Create and return triggered campaign event that issues a (generalized) Vaccine intervention. See [SimpleVaccine](#)

Parameters

- **camp** – The `emod_api.campaign` module instance which serves as the campaign accumulator.
- **trigger_treatment_list** – List of 1 or more triggers (or events or signals) which are listened to and trigger the distribution of the intervention. There is no default.
- **initial_efficacy** – Initial efficacy of the vaccine. Defaults to 1.0.
- **vaccine_take** – Fraction of the population receiving the vaccine for whom it is efficacious. Defaults to 1.0.
- **vtype** – ... Defaults to “AcquisitionBlocking”
- **box_duration** – Period of time over which the initial efficacy persists before decay. Defaults to 1 year.
- **immune_decay** – Period of time over which the efficacy decays to 0. Defaults to 10 years.
- **start_day** – The timestep when this campaign event takes effect. Defaults to 1.
- **duration** – How long the campaign event remains in effect. Defaults to forever.
- **property_restrictions_list** – Optional list of Individual Properties to limit the intervention to.
- **nodeIDs** – Optional list of node ids to target. Defaults to all.
- **black_period** – Undocumented.
- **black_trigger** – Undocumented.
- **event_name** – Undocumented.

Returns New campaign event that can be added to the campaign.

```
emodpy_tbhiv.interventions.vaccine.new_intervention_as_file(camp, file-
                                                             name='vaccine.json')
```

emodpy_tbhiv.reporters package

Submodules
